Week 3 Reflection Thing This week was like about math but also not really. I think we talked about graphs and maybe lines and some curves. Logistic was mentioned but I dont really remember what it was. It had a S shape I think and it goes up and down or something. Classification is probably when you put things into groups but im not sure which groups or why. Discriminant stuff was also there. Bayes maybe? I dont know what bayes is but it sounds important. There was variance and quadratic which I didnt really understand so I didnt write it down. One group can be inside another group which is kind of weird if you think about it. Overall this week felt confusing and also not very related to anything else we learned. I didnt really connect it to regression or anything else. Not sure why this matters. I dont really have questions because I didnt follow most of it. Maybe logistic is only for some cases but I dont know.
